

The **FIRST CHANCE** is often the **LAST**

The majority of brain development occurs before age 5. But 70 percent of young children attend preschools which do not meet minimum state requirements. So by the time they enter kindergarten, they're already at a disadvantage.

High-quality preschool is one of the best investments our state can make. Each dollar spent saves at least \$7 in future costs related to social services, remedial education, public safety and juvenile justice.

Support education by voting for candidates and ballot measures supporting early learning.

Because we must do better.
